## EXPERIENCE

### Frontend Engineer · ShopOS (Full-time)

Jan 2026 – Oct 2026 · shopos.ai

AI-native commerce platform, **$20M raised** from Binny Bansal's 3STATE Ventures. Owned the frontend for three AI products, built end to end: **Sloosh**, **Spacelab** and the **ShopOS app**.

- **Spacelab:** built a node-based AI pipeline builder on **React Flow** that chains **30+ frontier models** (Veo, Seedance, Kling, Nano Banana, Claude) through brand, catalog, vision and video-finishing nodes. Ask AI drafts a pipeline from a prompt, and any canvas publishes as a one-click Space: **10K+ spaces** created so far.
- **ShopOS app:** built the brand workspace end to end, centred on **streaming agent chat** (Vercel AI SDK, ProseMirror composer) for Performance Marketing, Creative Director, Store Manager and GEO agents, alongside Brand Memory, Creative Studio and the asset library.
- **Enterprise catalog review:** rebuilt in-app, off a legacy iframe, with split view, annotations and shareable recaps. It is the review surface for **8 enterprise accounts** including **Celio, Bear House and Holy Drip**.
- **Sloosh:** built ShopOS's creator app to put studio-grade AI creative in anyone's hands: pick a space, add your inputs, and get **UGC ads, product shots and short videos** in one click, with trend-led templates and every major image and video model in one place.
- **Nudge engine:** designed and built in-app nudges end to end, from backend rules to UI, that guide users to activation and plan upgrades: a config-driven eligibility engine with **Redis-cached** delivery, pacing (cooldowns, daily caps) and lifecycle tracking, rendered in slot-based placements across both apps.
- **Media metadata:** fixed image and video sizing across the asset library: published **@shop-os/media-meta** (ffprobe, SSRF-safe fetching) and moved the asset service to **measure-at-source**.
- **Design system and performance:** migrated from Radix to **Base UI** on Tailwind v4, and cut load cost with lazy-loaded editors and per-route **bundle budgets**.

**Stack** React, TypeScript, Next.js, React Flow, Vercel AI SDK, TanStack Query, Node.js, Redis

### Frontend Developer, Web3 · Dehidden (Contract)

Jan 2022 – Dec 2025

Sole frontend engineer for AI and Web3 products. Delivered for **Coinbase**, **Polygon** and **Play AI**.

- **Owned frontend architecture and delivery for 9 production applications**, working directly with partner teams.
- Engineered a high-scale NFT minting platform with **Coinbase and Polygon** that reached **1M+ users** and processed **100K mints in the first 24 hours**, with a **50% increase in user retention** during minting.
- Built **Polygon Copilot**, a GPT-powered assistant for Web3 developers in the zkEVM ecosystem, with multi-persona sessions and in-chat minting.
- Built **PlayAI Hub**, an AI × DeFi platform with real-time chat streaming over WebSocket and workflow-preset sessions for automated DeFi actions.

**Stack** React, TypeScript, wagmi, React Query, Tailwind CSS, Framer Motion, Solana

## SKILLS

| | |
|---|---|
| **Frontend** | TypeScript, React, Next.js, Tailwind CSS, React Flow, ProseMirror, TanStack Query, Zustand, Motion |
| **AI** | Vercel AI SDK, streaming chat UIs, MCP, OpenAI, Claude, Gemini |
| **Backend & Web3** | Node.js, PostgreSQL, Redis, REST, WebSocket, wagmi, Solana |
| **Tooling** | Playwright, Vitest, Sentry, PostHog, Git, Figma |

## EDUCATION

**Bachelor of Computer Applications (BCA)**, Amity University, Mumbai — 2018 – 2021 · CGPA 9.7 / 10
